

- SHALLOW AND NARROW INSTALLATION
- SIMPLE AND AFFORDABLE
- LOW INSTALLATION COSTS
- EXTENSIVE SURFACE AREA
- ADVANCED DRAINAGE SOLUTION

## MULTIFLOW

### FAST ACTING, DURABLE DRAIN FOR THE EFFICIENT REMOVAL OF EXCESS SOIL WATER

Multi-Flow Drainage System is a comprehensive soil water management system. It solves drainage problems simply and affordably. Its rugged design allows for shallow installation resulting in faster water entrance and reduced installation costs. Its extensive surface area collects water quickly and its unobstructed flow channels carry that water away at an astonishing rate. Multi-Flow's core is wrapped

in a thick geotextile fabric that prevents sand and soil from entering the flow channels, dramatically extending the life of the system. It is manufactured in three sizes: 15 cm, 30 cm and 45 cm. A full complement of "push-on" fittings and connectors is available in three sizes, which make it fast and easy to create comprehensive and professional drainage installations.

### Field of application

- for drainage of extensive green surfaces: athletic fields, golf course, recreational area, jogging path, tennis courts, campgrounds, etc.
- under sand: playgrounds, volleyball courts, plantation

### Advantages of the product

- high-strength
- easy to install
- effective
- convenient
- durable
- affordable

### Technical data

- panel shape
- can be inserted vertically and horizontally
- flexible and highly pliable
- variable connectors
- withstand 28 tonnes/m<sup>2</sup>
- the geotextile around the pipes works as an extra filter and keeps the pipes clean and open
- manufactured in three sizes: 15 cm, 30 cm and 45 cm

### Key benefits

- round and unobstructed channels
- quick drainage
- time-saving installation
- narrow trench is enough for installation
